Sarah Asap
123 Epic Lane
Philadelphia PA 19104

Dear Sarah Asap,

In the past few years, a safer and better treatment for Hepatitis C, a serious infection that can lead to liver disease, has become available. Over half of people who have Hepatitis C do not know it and do not look or feel sick.

The US Preventive Task Force recommends testing for all patients born between 1945 and 1965, even if no risk factors are present. Other local and national guidelines also recommend Hepatitis C testing for everyone born during this time.

We noticed that you were born within this time, but we have no record that you have been tested for Hepatitis C.

If you would like to be tested for Hepatitis C, which involves only a simple blood test, please call the office at 215-829-3523 or let us know at your next visit that you would like to be tested. If you have already been tested for Hepatitis C, please let us know and we will update your records.

Once tested, we will tell you your results. If you have Hepatitis C, you will be referred to an expert at Penn Medicine for treatment. If you prefer to see an expert somewhere else, we can help you.

To learn more about Hepatitis C, go to: www.PennMedicine.org/HepatitisC

Sincerely,

Robert Steven Rudenstein, MD
